Analyse Various types of Servers using Webalizer tool.

Exp. no : 15

Date : 10/10/26

Aim:

To analyze the performance and usage statistics of a web server using the Webalizer log analysis tool.

Algorithm:

→ Start the system and install the Webalizer tool.

→ Obtain the web server access log file, such as Apache's access.log.

→ Configure Webalizer with the location of the log file and the output directory.

→ Run Webalizer to process the web server log.

→ Webalizer reads and analyzes the HTTP request records.

→ It calculates statistics such as:

1. Total visits
2. Number of requests
3. Number of pages
4. Number of files
5. Total data transferred
6. Unique visitors
7. HTTP response codes
8. Most frequently accessed URL's
9. Browsers and operating systems used.

Scanned with OKEN Scanner

→ Generate the HTML report.
→ Open the generated report in a web browser.
→ Analyse the statistics and determine the server usage and performance
→ Stop the program.

procedure :

Webalizer is a log-analysis tool, so the practical implementation consists of configuring and executing webalizer rather than writing a conventional program.

Step 1 : Install webalizer

for Ubuntu / Linux :

Sudo apt update
Sudo apt install webalizer

Step 2 : Create webalizer configuration

Create or edit the configuration file :

Sudo nano /etc/webalizer/webalizer.conf

Example configuration :

LogFile	/var/log/apache2/access.log
OutputDir	/var/www/html/webalizer
HostName	localhost
HistoryName	/var/lib/webalizer/dns-cache.db
Incremental	yes
PageType	htm*
PageType	cgi

pageType php

page Type asp

page Type jsp

Step 3 : Run webalizer

sudo webalizer -c /etc/webalizer/webalizer.conf

Step 4 : View the Report

The generated report can be opened in a web browser :

http://localhost/webalizer/

The report contains graphical and tabular information about the web server.

Output :

A typical webalizer report may display :

webalizer statistics

Summary by Month

Month	Visits	Pages	Files	Hits	KBytes
Jan 2026	1250	3420	5210	7345	45820
Feb 2026	1480	8915	5740	8120	52140
Mar 2026	1635	4250	6210	8950	58760
Total	4365	11585	17160	24415	156720

Other sections of the report include :

Top URLs

1. /index.html
2. /about.html
3. /products.html

4. /contact.html
5. /login.html

Response Codes

200	OK	21500
301	Moved permanently	850
404	Not Found	1200
500	Server Error	45

Result :

Thus, the Webalizer tool was successfully used to analyze web server log files. The generated report provides useful information such as number of visitors, requests, pages viewed, files accessed, bandwidth usage, popular URLs, response codes, browsers and operating systems, which helps in evaluating web server usage and performance.
